The Story Behind the Numbers

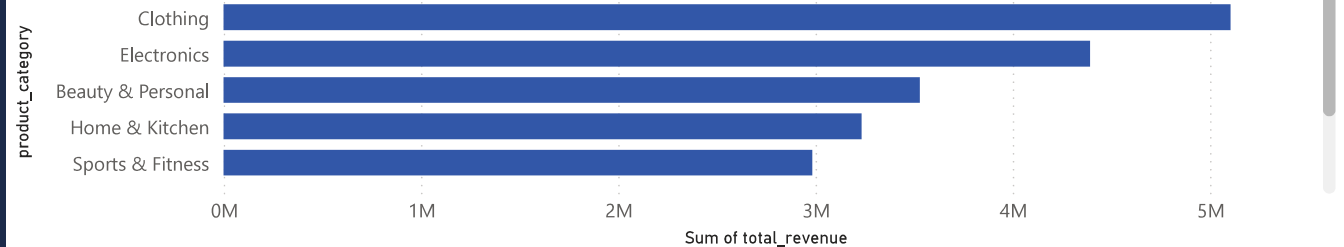

A data-driven narrative of our e-commerce performance

Where We Stand

Our e-commerce platform generated ₹25.07M in revenue across 374 customers and 671 orders between 2022–2024.

Revenue has shown a consistent pattern with peak performance in key festive months, driven primarily by Electronics and Sports & Fitness categories.

A data-driven narrative of our e-commerce performance

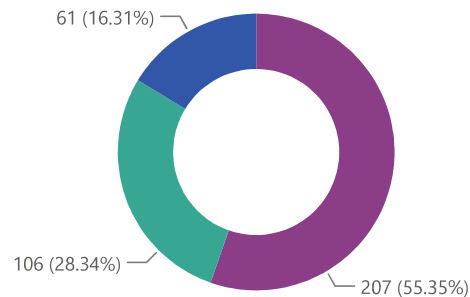

Who Are Our Customers?

More than half our customers (55%) are Loyal buyers who return repeatedly and contribute the majority of revenue.

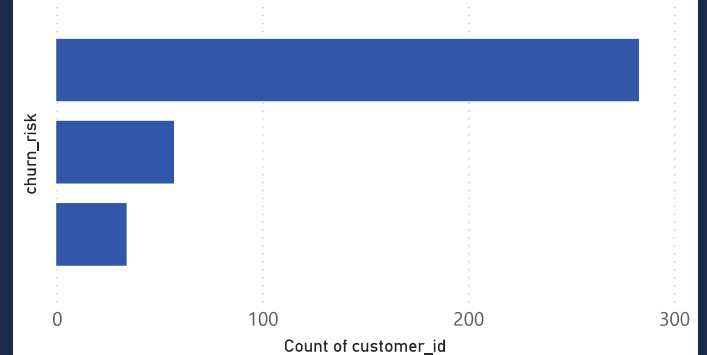

One-Time buyers (16%) represent our biggest growth opportunity — converting even 20% of them to repeat buyers could add significant revenue.

High-value Premium CLV customers drive outsized revenue despite being fewer in number.

Customer Mix

Churn Risk Distribution

Key Actions for Leadership

1. Launch re-engagement campaign for High Risk churn customers
2. Promote slow-moving inventory through targeted discounts
3. Double down on Loyal segment with loyalty rewards
4. Expand Electronics & Sports categories — highest revenue drivers
5. Investigate One-Time buyer drop-off — improve post-purchase experience

Risks We Must Address

Churn risk analysis reveals a segment of customers who haven't purchased in 90+ days. Without intervention, these customers may be lost permanently.

Simultaneously, slow-moving inventory ties up capital and signals misalignment between product offerings and customer demand.
